Classroom Connection: Quick Reference Guide on how to include the Art of the Interview in your classroom

Part 1. Teacher Planning and Modeling
Teachers plan, collaborate, and select a non-content related topic such as favorite food, games, sports.
Define the term and purpose of an interview to students and explain the role of the interviewer and the interviewee.
Select images of folklorists or reporters interviewing and the tools they use (notepad, pen, recording devices, cameras).
Create a graphic organizer with a primary question and space for illustrations and words, (see Figure 4 above and blank worksheet below).
Make an anchor chart with question words (see Figure 2).
Model an interview with a colleague or student and take notes.
Students discuss and reflect what they have seen and heard.

Part 2. Peer-to-Peer Interviewing
Students practice interviewing with classmates (partner A/partner B) or whole class with the teacher.
Students record questions and answers (interviewer writes keywords and/or illustrates key information on recording forms/graphic organizer).

Part 3. Family Interviewing
Students take the graphic organizer home to interview their family member.
Students bring completed interview forms back to the classroom to share with the class.
Classmates ask and answer questions about the work presented (which often leads to students returning home to learn more).
Students share what they learned and summarize their findings.

Part 4. Content-Related Interviewing
Teachers prepare content-related topic and interview forms.
Repeat process through modeling, peer-to-peer interviews, and family interviews.
Assist students in sharing and reflecting on what was learned and how the new learning connects to the overarching concepts and ideas in the content area.
Create spaces to display work and ongoing student questions.

Part 5. Assessing (Below find examples of questions and student responses from our projects.)
Teachers connect student learning to overarching concepts, for example, stability and change.
During assessments allow students the opportunity to explain, write, or draw responses.

Part 6. Final Projects
Students create a culminating project, for example, museum exhibit, gallery walk, parent night, collage, or storytelling.
Teacher invites experts such as community members, artists, or a technology specialist to assist in creating final product.
Part 7. Celebrating and Reflecting

Students create an invitation and invite family and community members to celebrate student work. This may include a classroom celebration, museum opening night, festival, or an international night.

Students reflect on what they liked most about doing research and presenting their work.

Other Considerations

Allow students time to brainstorm and articulate questions and ideas before conducting interviews.

Emphasize the importance of active listening, the interviewer does not talk about their own personal connections, rather the interviewer gets information by asking questions, allowing wait time, and recording responses.

Invite parents, community members, and experts into the classroom to participate in a student-led interview.

Create a system for organizing student work. Some examples include use of a folder, binder, or family culture notebook.

Photos and Examples of Finished Projects

Mural completed by 5th graders depicting leaving students’ homeland.

Some things from our culture will remain forever within our heart and soul…there are some things we must leave behind. How does one choose?
Classroom Connection: Weather Science Unit Examples and Worksheets

The standards we use to teach a 2nd-grade weather unit.

**Overarching Concepts:** Stability and Change
Students understand that some things stay the same while other things change.
Students learn that things may change slowly or rapidly.

**Virginia Standards of Learning—Second Grade**
SCI.G2.6.a identification of common storms and other weather phenomena
SCI.G2.6.b the uses and importance of measuring, recording, and interpreting weather data
SCI.G2.6.c the uses and importance of tracking weather data over time
SCI.G2.7.a effects of weather and seasonal changes on the growth and behavior of living things
SCI.G2.7.b weathering and erosion of land surfaces

**Pre-assessment:**
What do you know about weather?
What kinds of severe weather have you experienced?
What are the similarities and differences of the four seasons?
Create a diagram showing the parts of the water cycle.
Match photos of weather with vocabulary words.

**Ongoing assessments:**
In what ways does extreme weather affect the local community?
Read and record temperature changes over time and look for patterns and changes.

Top Photo:
An example of a pre-assessment generated by student wonderings.

Bottom Photo:
Weekly temperature graph.
Post-assessment:
How does severe weather affect change?
Give examples of how weather and seasonal changes affect the behavior of living things.

How does severe weather impact the community?
Research, explain, and write about how severe weather affects or makes changes to a community.

Weather Assessment
Choose one of the following extreme types of weather: (hurricane, tornado, blizzard, thunderstorm, or flooding.)
Draw and write how this weather affects the community (people, buildings, natural resources, plants and animals.)

flooding people die the tree
fall down to the house Animals
die the house break then they
don't have, food, rope, light and bed
and the people life get change to
die or don't have nothing else
like no house then there
life ec change to have things
in school this happen to my mom
when she was little in this
happen

Interviewer (you—the person who asks questions) _______________________

Interviewee (the person you ask questions) _______________________

Tell me about a time that you experienced extreme/dangerous weather.
What happened?

When did it happen?

Where was it?

Who was with you?

Did the stormy weather leave a change in the community? In what ways?
